

# UV BENCH

**ACHIEVE BETTER HYGIENE WITH AESTHETIC AND TIMELESS DESIGN FURNITURE. DISINFECT OBJECTS QUICKLY, SAFELY AND CHEMISTRY-FREE**

In the workplace of tomorrow, we must create a safe environment for employees and customers. An increased focus on risk of infections and efficient hygiene and cleaning standards can make it safe for people to meet again and with the UV BENCH this is solved with an aesthetic design.

The furniture combines UV (ultraviolet) technology with furniture design. The unique combination of reflective materials and correctly placed UV lamps, provides in only 10 seconds 360 degree disinfection of objects such as laptops, mobile phones, and office equipment.

The furniture is simple, functional, and a sublime handcrafted solution that makes a virtue out of necessity. Its primarily designed and constructed based on a need to disinfect objects that passes from hand to hand.

UV BENCH is soft to sit on, functional and spacious, and is produced in different colors and materials. The narrow window on the front of the bench shows the world that there are other ways of disinfection than alcohol and soap.

The UV BENCH is designed by the Danish renowned designer Kasper Salto. The stylish and simple design makes it ideal for offices, as a decorative and long-lasting investment.
